

THAT WHICH IS CLAIMED IS:

1. A doll head comprising:

a head housing defining an interior cavity, a pair of doll eye apertures and a pair of ear portions;

an eye change mechanism supported within said interior cavity having a plurality of eye images and means for aligning a selected pair of said doll eye images with said eye apertures; and

a facial mask having a facial portion, a pair of ear elements and a pair of mask eye apertures, said facial mask being removably securable to said doll head by engagement of said ear elements with said ears portions such that said mask eye apertures generally align with said doll eye apertures.

2. The doll head set forth in claim 1 wherein said facial mask is formed of a generally resilient material and wherein said facial mask deforms during attachment to said head housing to provide a snap fit attachment.

3. The doll head set forth in claim 2 wherein said head housing defines a rod aperture and wherein said eye change mechanism includes a pushrod extending through said rod aperture.

4. The doll head set forth in claim 3 wherein said doll head defines a rear surface and wherein said rod aperture is defined in said rear surface.
